Progressive retinal atrophy (GR PRA) - PCR

Result GR-PRA1: genotype N/N (Clear)
Interpretation: The analysed dog is noncarrier of the mutation (GR-PRA1) and will not develop this form of PRA. Since it cannot pass the mutation onto its offspring, it can be mated to any other dog. This result is only valid for the submitted sample material. Please note, that there are other forms of PRA in this breed, that will not be detected with this test (e.g. PRC2PRA).

The current result is only valid for the sample submitted to our laboratory. The sender is responsible for the correct information regarding the sample material. The laboratory can not be made liable. Furthermore, any obligation for compensation is limited to the value of the tests performed.

There is a possibility that other mutations may have caused the disease/phenotype. The analysis was performed according to the latest knowledge and technology.

DNA TEST FOR GENE CAUSING PROGRESSIVE RETINAL ATROPHY (GR_PRA2)

Registered Name: Buck A Roo of the Morning Valley

Registration Number: SLR GR 004057

Microchip/Tattoo Number: 528140000430464

Breed: **GOLDEN RETRIEVERS**

This dog is CLEAR of progressive retinal atrophy (GR_PRA2).

Authentication code: AC4724190

Explanation of terms:

CLEAR: these dogs have two normal copies of DNA. Clear dogs will not develop PRA as a result of the GR_PRA2 mutation, although we cannot exclude the possibility they might develop PRA due to other mutations they might carry that are not detected by this test.

Result authorized by: Dr. N. G. Holmes (Genetic Services Manager)

Test completed: 27 June, 2013

Result only applies to sample supplied

Genetic Services, Animal Health Trust, Lamwades Park, Kentford, Newmarket, Suffolk, CB8 7TU, UK

Ichthyosis

Result : **Normal homozygous**

Tested disease : **Ichthyosis**

Interpretation : The animal has 2 normal copies of the gene implied in Golden Retriever Ichthyosis. The animal will not develop Ichthyosis. The animal will not transmit the genetic anomaly to its progeny.

Result date : **13/07/12**

Lina MUSELET
Engineer in genetics

Explanations :

This test is specific to Ichthyosis in Golden Retriever breed. This dermatological disorder is inherited as an autosomal recessive trait. This test relies on the detection of the normal form of the gene implied in Ichthyosis and the only defective form known up to date. This one can not be used to detect other forms of dermatological inherited diseases, nor other dermatological ailments acquired during the life span of the animal. The technology underlying this test is world-wide patented by CNRS. ANTAGENE has a exclusive international license to commercialize this test.
